

RBR Darren Digidashes Quickstart

PreRequisites:

RSF (RallySimFans) RBR Install using launcher Version V1.0.77.0 or later. Basically any version after the 1st May 2003 Update should be fine.

Resolution set to 1080p or higher

You can find your launcher version here:

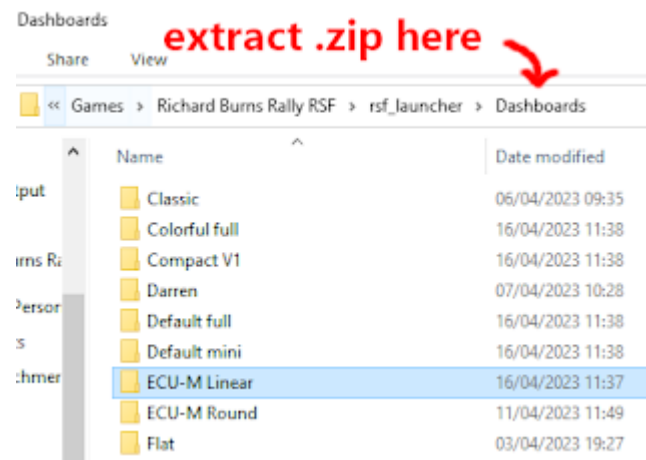

Installation

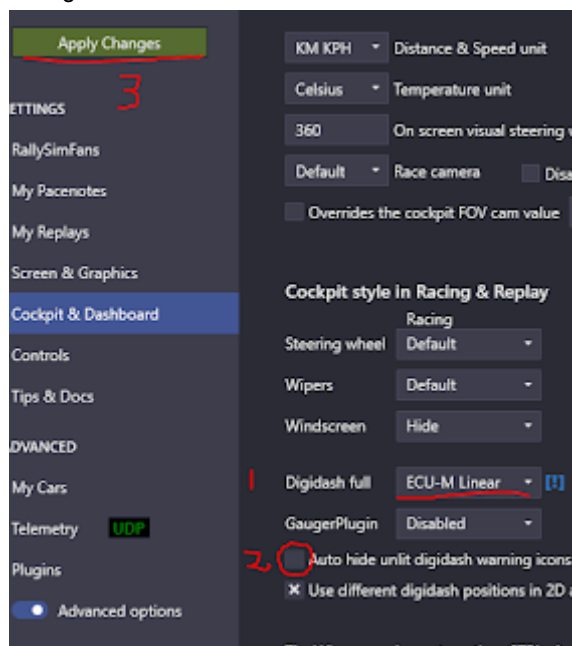

Download the zip file and extract the folder into your Dashboards folder. This will be something like:

C:\Games\Richard Burns Rally RSF\rsf_launcher\dashboards\

(replace C:\Games\Richard Burns Rally RSF\ with the location of your RSF base folder)

Open the launcher. Go to Cockpit and Dashboard and select the dash from the list. In order for my dashes to operate as intended I recommend leaving 'Autohide unlit digidash warning icons' unchecked. Click Apply Changes.

NOTE: make sure RBR in-game options/screen/dashSize is set to full. And RBR needs restarting if a new digidash style or screen resolution is selected.

That's it.

Bespoke Digidash design service

Any dashes I make for my own use will be posted for free here. I will continue to make them when I have an idea I'm interested in and I have enough free time. If you want me to design a bespoke dash then I can do that (within the limitations of what's possible) in exchange for a small donation. These dashes take a lot of time/effort and testing (sometimes days) and I can't afford to dedicate that amount of time out without some support and any donations really help ensure my modding work can continue. if you wish to discuss this pop over to my discord.

Upgrade from a Previous Version

Simply extract the new files and copy them over your existing versions. Overwrite when prompted

To Uninstall

Simply delete the dash from your Dashboards folder

These dashes may not be modified without my permission.

Please get in touch with me on discord if you have any comments, questions or want to test beta releases.
